

Gluechip Finish

A Gluechip Finish is a sparkling texture that looks like frost during the winter or a fern-like pattern. This finish is semi-private because objects behind it become blurred when 10-12" away from the glass, and also because each design element is surrounded by an 1/8" clear pinstripe. Objects can be seen thru the clear pinstripes when right up against the glass peering thru, however, from a distance, all you see is the beautiful shimmer of the gluechip, with light, shapes and colors coming thru.

Hand Made in America

Design elements are Sandblast **Etched on the top surface** of the glass, and are solid white shapes.

Design elements are Sandblast **Sculpted, cut deep** into the glass, a flat emboss look, of solid white shapes.

Design elements are Sandblast **Etched on the top surface** of the glass, and features **"shading"** where the sandblast density gently fades out to clear glass, (a "gradient-like" effect) that creates a 2 dimensional effect, but is not caved deep into the glass like 3D.

Design elements are Sandblast **Sculpted, cut deep** into the glass at **varying depths that create a relief texture**. Sandblasting has **"shading"**, where the sandblast density gently fades out to clear glass, (a "gradient-like" effect), creating 3 dimensions in the design elements

Design elements are Sandblast **Sculpted, cut deep** into the glass, a **flat emboss** look. Carved elements are airbrush painted with a permanent translucent glass dye.

Design elements are Sandblast **Sculpted, cut deep** into the glass at **varying depths creating a relief texture**. Carved areas are airbrush painted with a permanent translucent glass dye. Dark and light gradients are added to highlight details and enhance the look.
